

THE NATIONAL SAMPLE SURVEY

EIGHTEENTH ROUND : JUNE 1963—MAY 1964

NUMBER 169

TABLES WITH NOTES

ON

HOUSING CONDITION OF SCHEDULED TRIBE
HOUSEHOLDS OF UNION TERRITORIES
OF MANIPUR AND TRIPURA

Issued by

THE CABINET SECRETARIAT : GOVERNMENT OF INDIA

ACKNOWLEDGEMENT

The report has been finalised by B. R. Panesar. A. K. Roy and P. C. Kundu were associated in the work relating to the preparation of report.

Supervision of computing, punching and machine tabulation was entrusted to H. B. Chaudhuri, . Palit, Rajen Roy, S. N. Das, N. K. Dey, B. L. Banerjee respectively.

The design of the survey was prepared by the Indian Statistical Institute, Calcutta.

The primary data were collected by the Directorate of the National Sample Survey, Government of India.

THE NATIONAL SAMPLE SURVEY

EIGHTEENTH ROUND : JUNE 1963- MAY 1964

NUMBER 169

TABLES WITH NOTES ON HOUSING CONDITION OF SCHEDULED TRIBE HOUSEHOLDS OF UNION TERRITORIES OF MANIPUR AND TRIPURA

*The report entitled—'Tables with Notes on Housing Condition of Scheduled Tribe Households of Union Territories of Manipura and Tripura -18th round : June 1963—May 1964' was prepared by the Indian Statistical Institute, Calcutta and tripura. The views contained in the report are not necessarily those of Government of India.**

CHAPTER ONE

INTRODUCTION

1.1 The housing condition of scheduled tribes household formed an integral part of the survey on income, expenditure and indebtedness of scheduled tribe households in Union territories of Manipur and Tripura at the instance of Ministry of Home Affairs, Government of India. Data were collected through schedule 1.0: Consumer Expenditure in the eighteenth round of NSS. Results of income, indebtedness and consumer expenditure of scheduled tribe households were presented earlier (*vide* report No. 143, 145 and 158). In this report housing condition of scheduled tribes households in Union Territories of Manipur and Tripura is being discussed.

1.2 The survey was conducted in the household sector only. Even in the household sector, only the residential houses occupied by the households were covered.

1.3 The survey was conducted both in rural and urban areas of the Union Territories of Manipur and Tripura excluding the disturbed areas of Manipur.

1.4 Although the survey was conducted in both rural and urban areas of the two union territories the present report deals with only the rural sector. The effective sample size of the urban areas of these territories was found to be too small to throw up any valid estimate.

1.5 The field work of the survey started from the third sub-round of NSS in the month of June 1963 and continued upto May 1964, covering a period of one complete year.

1.6 Altogether 379 and 624 sample households of scheduled tribes were selected systematically with a random start from a list of scheduled tribe households of 192 villages each in rural areas of Manipur and Tripura respectively. Information was collected by enquiry from one of the members (usually the head) of the sample households.

1.7 The usual technique of interpenetrating network of sub-samples (IPNS) was employed at the data collection and processing stages. The report gives estimates for two independent and interpenetrating sub-samples (each providing equally valid estimates) and also for the combined sample.

1.8 The responsibility for the field work was vested with the Directorate of the National Sample Survey, Government of India.

1.9 Estimates presented in the report, relate to the condition of structure, age of the house and annual cost of repairs and maintenance.

1.10 The report is based mainly on percentage distributions of total number of households under different classifications relating to various aspects of housing condition, such as condition of structure and age of the house, source of drinking water and distance from the source, monthly rent and monthly household expenditure, etc. Most of the tables are in the form of two-way distributions, taking two classificatory characters at a time.

1.11 The tables in the text are based on the combined sample. These tables are serially numbered without any prefix. Tables given in appendices are indicated by a capital letter in the beginning of the table number, the letter referring to the appendix to which the table belongs.

*The draft report (No. D192) was first submitted by the Indian Statistical Institute, Calcutta, to the Government of India in December 1968. It was revised subsequently and resubmitted in August 1969.

1.12 A brief summary of the results is given in Chapter Two. Four appendices are attached to the report the first of which (Appendix A) gives the statistical tables with the description of tables. Appendix B gives in brief the outlines of the design of the survey and the procedure of estimation adopted. Extracts from the Instructions to the Field Workers are given in Appendix C and Appendix D gives a Facsimile of the schedule of enquiry.

Concepts and Definitions

1.13 The concepts and definitions followed in the enquiry of housing condition in the eighteenth round were almost the same as those of the seventeenth round. The concepts and definitions for some of the important items are given below.

1.14 *Dwelling house*.—A dwelling house included any structurally separated room or suite of rooms in permanent structure used or intended for habitation by family households and having a separate access to a street or to a common passage or stair way. Detached room or rooms for habitation which were clearly intended to form a part of the dwelling were treated also as a part of the dwelling, whereas any dwelling house originally intended for habitation by family households but which was in practice used for non-residential purposes like offices for other family enterprises were excluded for this enquiry on housing condition.

1.15 *Household*.—A household was a group of persons usually living together and taking principal meals from a common kitchen. A boarding house, a hotel or a hostel was treated as a cluster of households, where each individual boarder (with his dependents or guests) formed a separate house. Households maintained and fed directly by Government such as those in prisons, police quarters, cantonments, hospitals, asylum and relief camps were, however, excluded from the scope of survey.

1.16 *Household members*.—Any person who took principal meals with the household for at least 16 days during a period of 30 days preceding the date of survey was considered to be a member of the household. Such a person may be the head of the household or relation or protege of the head or an employee or guest of the household.

CHAPTER TWO

Summary of Results

2.0 Some aspects of the housing condition of scheduled tribe households in Union Territories of Manipur and Tripura revealed by this survey are being discussed with the help of a few tables.

2.1 *Condition of structure.*—Residential houses have been classified according to their condition of structure into three classes (1) excellent, (2) fairly good and needing no major repair and (3) bad, dilapidated and improvised. Table (1) gives the percentage distribution of scheduled tribe households by condition of structure for all households (both kinds of houses taken together) in rented and owned in union territories of Manipur and Tripura. The table shows that both in Manipur and Tripura most of the households lived in houses belonging to class (2). The percentage distribution of all types of households in both the territories reveal that about 10 to 11 per cent of households had excellent houses, 50 to 54 per cent had fairly good houses which needed no major repair and about 36 to 40 per cent households lived in houses whose condition was bad, dilapidated and improvised.

TABLE (1) : PERCENTAGE DISTRIBUTION OF SCHEDULED TRIBE HOUSEHOLDS (ALL HOUSES, BOTH RENTED & OWNED, TAKEN TOGETHER) BY CONDITION OF STRUCTURE IN UNION TERRITORIES OF MANIPUR AND TRIPURA : NSS 18TH ROUND, RURAL : JUNE 1963—MAY 1964

condition of structure (1)	all households	
	Manipur (2)	Tripura (3)
1. excellent	10.61	9.72
2. fairly good and needed no major repair	53.63	50.45
3. bad, dilapidated and improvised	35.76	39.83
4. total	100.00	100.00
5. number of sample households	379	624

2.2 Table (2) gives the percentage distribution of scheduled tribe households by the age of the house of all houses (both rented and owned) in which they live. The distribution is roughly the same in both the Union Territories, excepting that while in Tripura a larger proportion of households live in newly built houses compared to Manipur, the proportion of households living in very old structures is higher in Manipur than in the other Union Territory.

TABLE (2) : PERCENTAGE DISTRIBUTION OF SCHEDULED TRIBE HOUSEHOLDS BY AGE OF THE HOUSE OF ALL HOUSES IN UNION TERRITORIES OF MANIPUR AND TRIPURA : NSS 18TH ROUND, RURAL : JUNE 1963—MAY 1964

age of the house (in years) (1)	Manipur (2)	Tripura (3)
1. 0—2	4.48	13.33
2. 2—3	10.04	11.28
3. 3—5	25.29	23.56
4. 5—7	23.58	20.16
5. 7—10	13.31	12.27
6. 10—15	8.55	11.06
7. 15—20	3.99	2.94
8. 20—40	0.93	3.67
9. 40—60	0.67
10. 60 & above	9.83	1.06
11. total	100.00	100.00
12. number of sample households	379	624

2.3 Table (3) gives the estimated cost of repairs and maintenance per scheduled tribe household during last year of the survey in rupees by condition of structure in union territories of Manipur and Tripura. Cost of repairs and maintenance per household (during last year) on residential houses in Tripura was nearly twelve times that of Manipur taking into consideration all types of structures (Rs. 19.50 in Tripura and Rs. 1.65 in Manipur). The amount spent on excellent houses was more than the rest of the other category of households (about Rs. 11 and Rs. 65 in Manipur and Tripura states respectively).

TABLE (3) : ESTIMATED COST OF REPAIRS AND MAINTENANCE PER HOUSEHOLD (IN RUPEES) DURING THE LAST YEAR BY CONDITION OF STRUCTURE OF SCHEDULED TRIBE HOUSEHOLDS IN UNION TERRITORIES OF MANIPUR AND TRIPURA; NSS 18TH ROUND, RURAL : JUNE 1963—MAY 1964.

condition of structure (1)	Manipur (2)	Tripura (3)
1. excellent	10.87	65.31
2. fairly good	0.31	15.43
3. bad, dilapidated, improvised	0.90	13.36
4. all classes	1.65	19.50
5. number of sample households	3/9	624

2.4 *Drinking water.*—It is found that most of the people (about 70% of households) in Manipur utilised river, lake and spring for drinking purposes, while in Tripura most of the people (53% of households) utilised tube-well water for their drinking purposes. Percentage of households utilising different sources for drinking purposes is given in Table (4).

TABLE (4) : PERCENTAGE DISTRIBUTION OF SCHEDULED TRIBE HOUSEHOLDS BY SOURCE OF DRINKING WATER IN UNION TERRITORIES OF MANIPUR AND TRIPURA; NSS 18TH ROUND, RURAL : JUNE 1963—MAY 1964.

source (1)	Manipur (2)	Tripura (3)
1. municipal tap	1.00	..
2. well	0.71	4.50
3. tube well	0.71	53.11
4. tank and pond	18.09	4.06
5. river, lake, spring	69.45	26.83
6. others	10.04	11.50
7. total	100.00	100.00
8. number of sample households	379	624

2.5 *Distance from source.*—Percentage of households having water facilities within the premises of their house is very small (3% to 4%). About 21 to 30 per cent households brought drinking water from a distance of 51 to 100 yards. About 29 per cent of the households in Tripura had to bring water from a distance of 101 to 400 yards against 13 per cent in Manipur State.

TABLE (5) : PERCENTAGE DISTRIBUTION OF SCHEDULED TRIBE HOUSEHOLDS BY DISTANCE FROM SOURCE OF DRINKING WATER IN UNION TERRITORIES OF MANIPUR AND TRIPURA : NSS 18TH ROUND, RURAL : JUNE 1963—MAY 1964.

distance from sources (in yards) (1)	Manipur (2)	Tripura (3)
1. within premises*	2.99	3.89
2. upto 50	24.71	23.69
3. 51—100	29.63	20.94
4. 101—400	13.25	28.61
5. over 400	29.42	22.89
6. total	100.00	100.00
7. number of sample households	379	624

*refers to within campus and boundary wall.

APPENDIX A

EXPLANATORY NOTES ON TABLES

A.1. The tables showing detailed figures for different items of Housing Condition of Scheduled Tribe households of rural sector of Union Territories of Manipur and Tripura are given in this appendix. For convenience, the table numbers have been coded. The letter A in the beginning of each table code stands for Appendix A. The left hand digit refers to the State : Digit 1 stands for Manipur and 2 for Tripura. The digit following the first point from left stands for the item presented in the table. The items for which the tables are presented are given below :

1. conditions of structure
- 2 age of the house
3. source of drinking water
4. distance
5. cost of repair and maintenance

A.2. The estimates for each item are given by sub-samples (indicated by s1 and s2) and the combined sample (indicated by comb.).

A.3 The estimates are given for union territories of Manipur and Tripura only.

A.4. Tables are presented by two-way classification.

A.5. For presenting tables of percentage distributions the following bases are used :

- (a) base : total number of households=100
- (b) base : total number of households under each column=100
- (c) base : total number of households under each row or line=100

A.6. Method of classification of households by monthly household expenditure, condition of structure, age of the house, sources of drinking water and distance of the source of drinking water are given below.

A.7. *Monthly household expenditure.*—Households were classified by the average monthly household expenditure as reported in block 2 against line 8 of schedule 1.0 and not on actual monthly household expenditure levels in rupees, arranged in ascending order of magnitude. The expenditure levels are grouped into 9 classes as follows :

	monthly household expenditure levels (in rupees)
1.	0— 25
2.	26— 50
3.	51—100
4.	101—200
5.	201—300
6.	301—400
7.	401—500
8.	501 & above
9.	all levels

A.8. *Age of the house.*—Households were classified for the information given about the house occupied by the age of the house in years (line 2, column 3 of block 18). The classes for the age of the house are given below in years :

	age of the house (in years)
1.	0— 2
2.	2— 3
3.	3— 5
4.	5— 7
5.	7— 10
6.	10— 15
7.	15— 20
8.	20— 40
9.	40— 60
10.	60 & above
11.	all classes

The groups 0—2, 2—3,.....stand for less than 2, 2 and less than 3, and so on.

A.9. *Condition of structure.*—Information of condition of structure as reported against line 1, column 3 of block 18 was used to classify households as excellent, fairly good and which needed no major repair and bad, dilapidated and improvised.

A.10. *Source of drinking water.*—Source of the drinking water was classified under municipal tap, tube-well, well, pond, tank and river, lake, and other sources according to the information available against line 3 of block 18, column 3.

A.11. *Distance from the source.*—Distance from the source of drinking water was available against line 4, column 3 of block 18. Grouping for the distance in yards from the source of supply is given below.

distance (in yards)	
1	within premises
2	upto 50
3	51—100
4	101—400
5	over 400

A.12. *Cost of repair.*—The cost of repairs and maintenance during the previous year in rupees was obtained from the recorded entries against line 7, column 3 of block 18.

APPENDIX B

Sampling Design and Method of Estimation

B1. Information on Housing Condition formed a part of the Consumer Expenditure Enquiry (Schedule 1-0). The sampling design and estimation procedure followed for housing are the same as those followed for schedule 1-0. It may be pointed out that as the present report deals with the rural sector of Union Territories of Manipur & Tripura only sampling design adopted for rural areas is given. Since the villages selected for the eighteenth round were to be taken up for this survey also, the sampling design was the same as that of the eighteenth round.

B2. General : The sampling design in the rural sector was stratified two-stage in which the first stage units were the villages and the second-stage units were the households from which information was collected. The sampling design was self-weighting for each sub-sample at the level of each Union Territory.

B3. Stratification : Strata were formed within each Union Territory by grouping together contiguous sub-divisions/tehsils (sub-division in Manipur and tehsils in Tripura) or parts of contiguous sub-divisions/tehsils such that the sum of the sizes of the villages in each stratum was exactly equal. The "size" adopted was 1961 census population of the village rounded off to the next higher multiple of 1000. While forming strata, the transport facilities available between adjacent sub-divisions/tehsils were also taken into consideration. 8 strata were formed in each Union Territory. The allocation of 192 villages was made in each Union Territory.

B4. Selection of villages : Within each stratum 4 independent interpenetrating sub-samples of 6 villages each were selected circular systematically with probability proportional to the "size" of the villages. In some of the big sample villages, the number of hamlet groups to be formed was specified in the sample list. In each such village the investigator was to form the specified number of hamlet groups of approximately equal population content and select one with equal probability for survey. The selected hamlet group was taken up for both the general enquiries of the eighteenth round for Scheduled Tribe survey.

B5. Selection of households : Within each sample village or hamlet group, a linear sample of households was selected from among those households which had the head of the household belonging to a Scheduled Tribe after arranging those households by household size 1 to 4 and 5 and above. The sampling interval and random start to be used for selection in each village had been fixed so as to make the design self-weighting within each union territory.

B6. Work programme : The survey period for the whole round was one complete year divided into 6 sub-rounds of 2 months each. In each sub-sample of a stratum the 6 sample villages were numbered from 1 to 6 according to their order of selection. Each sample village was visited and surveyed only once in the whole round. The field work of the survey started from the third sub-round of the eighteenth round of NSS in June 1963 and continued upto the end of May 1964, covering a period of one complete year.

B7. Sub-samples 1 and 3 were surveyed by one party of investigators and sub-samples 2 and 4 by another.

B8. Estimation procedure : Since the design adopted was self-weighting within each Union Territory estimated of total (T) for a territory for a characteristic from a sub-sample for the whole round is given by

$$T = M \sum_{s=1}^k \sum_{i=1}^6 \sum_{j=1}^{h_{si}} y_{sij}$$

where J denotes the j^{th} sample household
i ,, i^{th} sample village
s ,, s^{th} stratum
k ,, number of strata in the territory
h ,, number of households selected
y ,, value of the characteristic
M ,, multiplier for the territory.

Thus, y_{sij} is the value of characteristic of the s^{th} stratum, i^{th} sample village and j^{th} sample households and M is given by

$$M = I_1 \times I_2$$

where I_1 is the interval for village selection and I_2 is that for household selection.

B9. Sub-sample estimates :

If T₁ and T₂ are the two independent sub-sample estimates of total, the combined sub-sample estimate T is

$$T = \frac{1}{2} (T_1 + T_2) \dots\dots\dots (2)$$

B10. Table (B1.1) gives the distribution of sample villages allotted and households surveyed by Union Territory (Manipur & Tripura) in rural areas.

APPENDIX C

EXTRACTS FROM INSTRUCTIONS TO FIELD WORKERS

NSS Eighteenth Round

Housing Condition

C1. Data on "Housing Condition" were collected through Household Schedule 1-0 : Consumer Expenditure. Extracts from the Instructions to Field Workers are reproduced only for the relevant items which were used for tabulation.

Section Five : Household Schedule 1-0 : Consumer Expenditure

(Housing Condition)

5.2.8 *Item 8 : Average monthly household expenditure* : An estimate of average monthly household expenditure incurred towards non-productive domestic consumption only should be recorded here. The average may be taken over the last twelve months in nearest rupees.

5.18 *Block 18 : Housing Condition* : The definition of the dwelling house will be the same as that followed in the 17th round of the NSS, and collection of data will be as before be restricted to residential housing of the sample households. For the purpose of this block, a dwelling house shall include any structurally separated room or suite of rooms in permanent structure used or intended for habitation by family households and having a separate access to a street or to a common passage or stairway. Detached room or rooms for habitation which are clearly intended to form a part of the dwelling shall also be counted as part of the dwelling house.

5.18.1 *Item 1 : Condition of structure* : Against this item is to be recorded the physical condition of the house in the sense whether the house is good for habitation and needs no immediate repairs ; fairly good and needs no major repairs ; bad and old and needs immediate major repairs or structural changes ; and improvised one, not suitable for permanent habitation at all. Major repairs will mean such essential repairs of the house without which the house is risky or very unhealthy for human habitation. The entries are to be made in code numbers given in the schedule.

5.18.2 *Item 2* : The age of the dwelling in which the sample household is located is to be entered against this item in completed number of years. For example, if the age is less than a year, record "0"; if the age is 4 years 7 months it will be counted as 4 years ; if it is 4 years 1 month, it will also be counted as 4 years, and so on. Further in recording the age, the year of completion of the original structure is to be taken into consideration ; the age of any small additions to the original structure is not wanted. But it may so happen that the original structure is insignificant to the additions made after some years of the completion of the original one. In such cases of substantial structural additions on the ground floor, the age of the additional structure is to be recorded against this item but in the case of vertical additions the age of the structure on the ground floor should be taken into consideration. A difficulty may arise in getting the age from a respondent household if it happens to be a tenant one ; in such cases all possible means are to be tapped to get the correct information.

5.18.3 *Item 3 and 4 : Drinking water* : If more than one source is used, the one used most frequently and its distance should be recorded in code. For "source of drinking water", see the codes on the body of the schedule. Some of the terms used in this connection are explained below.

The term *municipal tap* is used in a broad sense and should include any source of drinking water managed and controlled by a public body, e.g., a water-supply undertaking, a municipality, a notified area, a cantonment board, a gram panchayat or Government.

A *protected tube-well* (either power or hand operated) should be situated at least 10 ft. away from a latrine and the space surrounding it should be a cement construction.

A *protected well* should be situated at least 10 ft. away from a latrine and should be surrounded by a pucca wall ; the space surrounding it should be of cement construction.

The distance codes are self-explanatory. "Within premises" refers to within campus or boundary wall.

5.18.4 Item 5 and 6 : Whether the house is rented or not, is to be recorded against item 5, and if rented, the monthly rent is to be recorded against item 6. Where the house is free of rent it should be treated as not rented and in such cases code 2 should be entered against item 5 and item 6 should show a "O" entry. If the dwelling is owned by the household even though the house-site on which it stands is leased in, the house should not be reported as rented and code 2 should be entered against item 5.

5.18.5 Item 7 : Cost of repairs and maintenance : The total expenditure incurred by the sample household towards repairs and maintenance of the dwelling house during the year preceding the date of survey would be entered against this item.
